

At a Glance

- Distribute the responsibility of safety awareness and administration, allowing the safety administrator to proactively correct safety concerns
- Save time analyzing (and re-analyzing) injuries

Safety Tracker

Overview

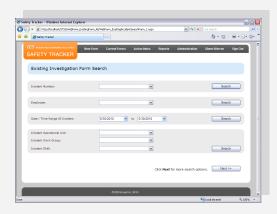

In every industry, health and safety is essential to the wellness of employees and keeping productivity high and budgetary costs low. All safety software solutions offer the same basic options, but Safety Tracker sets it self apart by offering a revolutionary workflow that distributes the tasks associated with the safety incident lifecycle.

Near Miss, Accident or Work Refusal details are completed by the supervisor / safety committee member. After completing all required details, Safety Tracker sends the Safety Administrator an email to notify them of a new safety incident. The system ensures all required fields are filled out and allows the Safety Administrator to complete the rest of the online safety incident. Each incident has a date/time/user time stamped story board and document/picture attachment module, allowing secure free flowing communications between all associated members.

This Incident Management engine functions as a central processor, to track and analyze Root Cause and Departmental Quantity of any type of incident. Safety Tracker provides all the functionality of other safety software, while matching your workflow and providing you the reports to effect change.

Distribute your safety administration and eliminate the risk that comes with using spreadsheets or closed systems by using an enterprise level web based collaboration solution.

Let IES Group improve your safety process, and allow the Safety Administrator to spend their time analyzing safety data, affect change and not chase it.

Key Benefits

- Manage workplace accidents to reduce you insurance premiums
- Comply with workplace safety and labour laws
- Reduce overtime & labour
- Root & sub root cause analysis
- Powerful reporting tools
- Report export to MS Excel
- Customized reports

Why IES Group?

IES Group has over a decade of experience implementing complex software modeling & reporting systems empowering quick real time information based decisions.
